LARGE ARC STAGE SPECIFICATIONS

SYSTEM DISCRIPTION

The LARGE ARC Roof is a fixed construction, based on four inward curved trusses that are mounted to side masts. A hinged connection at the outer ends simplifies the setup of the system. Special corners make the connection between the arches and the main grid. Changing the arch & leg configurations makes alternate layouts/dimensions possible. The arched trusses have a keder profile on top to fit the optional canopy to the truss. The PA wings shown are an optional extra.

TECHNICAL SPECIFICATIONS

Roof dimensions	13.6mtrs x 12.6mtrs
Loading capacity (UDL)	3600kg (approx)
Total weight (approx)	2450kg (approx)
Max windspeed	28.4m/s, (63.3mp)
Canopy	Side, Back & Top
Canopy Colour	Outside Grey, Inside Black
